Installing & Configuring WordPress

Introduction

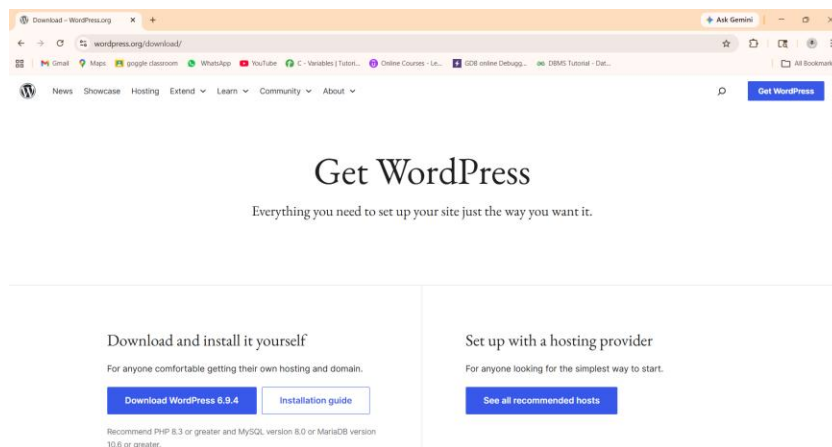

WordPress is a popular Content Management System (CMS) used to create websites and blogs without advanced coding knowledge.

Prerequisites

- Domain name : (e.g. www.name.com)
- Web hosting with cPanel access
- Stable internet connection

Step 1: Download WordPress

1. Visit the official website <https://wordpress.org/>

2. Click on “Download WordPress”.
3. Save the ZIP file to your system.
4. Extract the file (Right-click -> Extract).

Step 2: Create a Database

WordPress needs a database to store content like posts, users and settings.

1. Login to your hosting cPanel.
2. Find and open MySQL Databases.
3. Create:
 - Database Name
 - Database Username
 - Password
4. Click Add User to Database.

5. ✓ Select All Privileges.

Save these details safely, you will need them later.

Step 3: Upload WordPress Files

1. Open  File Manager in cPanel
2. Go to public_html folder (main website directory).
3. Click Upload.
4. Select the WordPress ZIP file.
5. After upload, extract it.

Now your Website files are placed on the server.

Step 4: Configure WordPress

1. Open your browser.
2. Enter your domain name (e.g. www.name.com)
3. Choose your preferred language .
4. Enter database details:
 - Database Name
 - Username
 - Password
 - Host -> usually localhost
5. Click Submit.

Step 5: Install WordPress

1. Fill in website details:
 -  Site Title (Your website name)
 -  Admin Username
 -  Strong Password
 -  Email Address
2. Click Install WordPress

WordPress will now install automatically.

Step 6: Login to Dashboard

1. Go to  www.name.com/wp-admin

2. Enter your username and password.

This is your admin dashboard where you control everything.

Step 7: Basic Configuration 🌀

1. General Settings

- Log in at www.name.com/wp-admin using your admin credentials.
- In the Left sidebar, go to Settings -> General.
- Set your Site Title, Tagline, Time zone, and Date format.
- Click Save Changes.

2. Permalinks

- Go to Settings -> Permalinks.
- Select Post name as the permalink structure for clean, SEO-friendly URLs.
- Click Save Changes.

3. Installing a Theme

- Go to Appearance -> Themes.
- Click Add New and search for a theme.
- Select and Click Install, then Activate.

4. Installing Essential Plugins

- Go to Plugins -> Add New.
- Search for and install the recommended Plugins:
 - a) Yoast SEO: for search engine optimization.
 - b) UpdraftPlus: for automated backups.
 - c) Wordfence Security: for firewall and malware scanning.
- d) Click Install Now for every plugins, then click Activate.

Step 8: Creating a First Page ■

1. In a Dashboard, go to Pages > Add New.
2. Enter a title (e.g. Home) in the title field.
3. Add content in the block editor by clicking the + button.
4. Once it ready, Click Publish.

Step 9: Creating a First Post ■

1. Go to Pages -> Add New
2. Enter the post title and body content.
3. Assign a Category and add Tags from the right-hand panel.
4. Set an Image by clicking the option in the right-hand sidebar.
5. Once it ready, Click Publish.

Troubleshooting Common issues:

- **Error establishing the database connection:** Verify the database credentials that you have entered.
- **404 error on pages:** Re-save your Permalink settings.
- **Cannot upload media:** Check folder permissions (set to 755 or 775).
